OBJECTIVE

Information Technology graduate with hands-on experience in full-stack web development and Python-based computer vision, looking to contribute strong problem-solving and development skills to a growing technical team.

WORK EXPERIENCE

Freelance

Dubai, UAE

Full-stack Software Developer

- Engineered a real-time visitor-tracking pipeline in **Python** using **YOLOv8** for person detection and **ByteTrack** for multi-frame identity tracking, processing live **RTSP** streams with **OpenCV** (4K→1080p downscaling, per-camera worker threads).
- Implemented hybrid **employee-vs-visitor classification** combining HSV uniform-color heuristics, **ORB logo feature-matching**, and an optional trainable PyTorch classifier (heuristic / model / hybrid modes), reaching **80% accuracy** on staff identification.
- Built a runtime-configurable **FastAPI** REST service (cameras, zones, events, evidence, config) with Swagger docs, allowing all detection/tracking/uniform parameters to be tuned live **without restarting** the service.
- Containerized with a multi-stage **Docker** build + docker-compose and backed the codebase with a **pytest** suite (~3,500 lines of tests across detection, tracking, zones, API, and uniform modules) plus a custom benchmark-scoring harness for regression tracking.

BAMS

04/2025 – 05/2025

Freelance Web Developer

- Migrated legacy web portal from CodeIgniter to a modern tech stack using React (with Next.js) for the frontend and Laravel for the backend, improving maintainability and performance.
- Revamped the user interface using shadcn/ui components to create a more user-friendly, modern, and responsive design, significantly enhancing the overall user experience.
- Designed and implemented a commercial fitouts landing page, aligning with brand goals and increasing customer engagement.
- Collaborated cross-functionally to ensure seamless integration, data migration, and functionality preservation throughout the transition.

Lodong Kr Inc.

11/2024 – 03/2025

Frontend Developer

Korea

- Collaborated with backend developers to integrate RESTful APIs using Swagger documentation, ensuring accurate data flow and application functionality.
- Utilized Next.js for the first project to build a modular, scalable frontend architecture with server-side rendering and dynamic routing.
- Employed Vanilla JavaScript in the second project to implement lightweight, high-performance interfaces without relying on frameworks.
- Focused on efficient state management, loading indicators, and error handling for smoother user interactions. Enhanced user engagement and performance consistency across different platforms and devices.

PROJECT EXPERIENCE

Shaisha's Leisure Hub

07/2025 – 10/2025

Web Development

- Developed a full online booking system for Shaishas Leisure Hub Massage.
- Built the frontend using Next.js and React, ensuring a fast and responsive user interface.
- Utilized reusable React and ShadCN UI components to deliver a clean, modern, and user-friendly experience.
- Integrated Axios for efficient and reliable API communication between frontend and backend.

SKILLS

- Programming Languages** — JavaScript, PHP, Python, HTML, CSS,
- Database Management** — MySQL, SQLite
- Software & Tools** — Microsoft Office (Word, Excel, PowerPoint), Visual Studio Code, Laragon, Copilot, Github
- Web Development** — Laravel, Bootstrap, WordPress, jQuery, React, Typescript, AJAX, Next.js, Vue.js, Axios, Shopify, Docker
- Soft Skills** — Communication, time management, teamwork, problem-solving, adaptability

EDUCATION

Bachelor of Science in Information Technology

Palompon, Leyte

Palompon Institute of Technology
